

How to think of proofs of arguments:

Think of a proof as a *path* from premises to a conclusion, i.e., as a way for getting to the conclusion from the premises. Each line in the proof (each step you take down the path) **must** be allowed by a rule.

This means that in order to offer a proof of an argument you need two skills that we have used before and one new skill: (i) recognizing that a formula might be an instance of different forms, (ii) identifying which forms a formula is an instance of, and (iii) making a plan for the proof (i.e., sketching the path).

- For each of the following formulas, give at least two statements with metavariables¹ that the formula is an instance of:

(a) $p \rightarrow ((\neg p \wedge s) \vee q)$

(b) $(q \rightarrow r) \wedge (r \vee p)$

(c) $\neg(r \vee t) \vee t$

- See the following rules:

$\begin{array}{l l} l & \varphi \wedge \psi \\ n & \varphi \\ l & \varphi \wedge \psi \\ m & \psi \end{array} \quad \text{E}\wedge \text{I}$	$\begin{array}{l l} l & \phi \\ m & \psi \\ n & \phi \wedge \psi \end{array} \quad \text{I}\wedge \text{I, m}$	$\begin{array}{l l} l & \phi \rightarrow \psi \\ m & \phi \\ n & \psi \end{array} \quad \text{E}\rightarrow \text{I, m}$
$\begin{array}{l l l} l & & \phi \\ m & & \psi \\ n & \phi \rightarrow \psi \end{array} \quad \text{I}\rightarrow \text{I-m}$	$\begin{array}{l l} l & \varphi \vee \psi \\ m & \varphi \rightarrow \chi \\ n & \psi \rightarrow \chi \\ p & \chi \end{array} \quad \text{E}\vee \text{I, m, n}$	$\begin{array}{l l} l & \varphi \\ m & \varphi \vee \psi \\ l & \varphi \\ m & \psi \vee \varphi \end{array} \quad \begin{array}{l} \text{IV I} \\ \\ \text{IV I} \end{array}$

¹Greek letters like ϕ , ψ and χ

Now, determine which of the following proofs have a correct instance of the rule in question (i.e., which of the following applications of rules have no mistakes).

(a) $I\wedge$

	\vdots	
7	p	...
8	$q \rightarrow r$...
	\vdots	
13	$(q \rightarrow r) \wedge p$	$I\wedge$ 1, 13

1	$s \rightarrow p$	Ass.
2	$u \vee r$	Ass.
	\vdots	
23	$s \wedge u$	$I\wedge$ 1, 2

1	$s \wedge u$	Ass.
	\vdots	
10	$q \vee \neg r$
	\vdots	
16	$(q \vee \neg r) \wedge (s \wedge u)$	$I\wedge$ 1, 10

(b) $E\wedge$

1	$(p \wedge q) \wedge r$	Ass.
	\vdots	
	\vdots	
13	r	$E\wedge$ 1
14	$p \wedge q$	$E\wedge$ 1

	\vdots	
16	$(p \wedge q) \wedge r$...
17	q	$E\wedge$ 16
18	r	$E\wedge$ 16
	\vdots	

1	$p \rightarrow (q \wedge u)$	Ass.
2	$(q \wedge u) \rightarrow r$	Ass.
	\vdots	
3	p	Ass.
4	$q \wedge u$	$E\rightarrow$ 1,3
5	r	$E\rightarrow$ 2,4
6	$p \rightarrow r$	$I\rightarrow$ 3-5
7	q	$E\wedge$ 4

(c) $E\rightarrow$

1	$(q \vee t) \rightarrow p$	Ass.
2	q	Ass.
	\vdots	
13	p	$E\rightarrow$ 1,2

	\vdots	
4	$(p \wedge q)$...
5	$p \rightarrow (q \rightarrow r)$...
	\vdots	
13	r	$E\rightarrow$ 4,5

1	$(w \vee s) \rightarrow t$	Ass.
	\vdots	
8	$w \vee s$...
	\vdots	
27	t	$E\rightarrow$ 1, 8

(d) IV

	\vdots	
16	$(p \wedge q) \wedge r$...
17	$r \vee s$	$\text{IV } 16$
	\vdots	

	\vdots	
4	p	Ass.
	\vdots	
8	$(p \vee q) \vee r$	$\text{IV } 4$

1	p	Ass.
2	$q \vee p$	$\text{IV } 1$

(e) $\text{I} \rightarrow$

	\vdots	
6	$(p \wedge q) \wedge r$...
7	u	Ass.
8	r	$\text{E} \wedge 6$
9	$u \rightarrow r$	$\text{I} \rightarrow 7-8$
	\vdots	

	\vdots	
11	$r \rightarrow s$...
12	$(p \wedge q) \wedge r$...
13	u	Ass.
14	r	$\text{E} \wedge 12$
15	s	$\text{E} \rightarrow 11, 14$
16	$u \rightarrow s$	$\text{I} \rightarrow 14-15$
	\vdots	

1	p	Ass.
2	q	Ass.
3	q	Rep. 2
4	$q \rightarrow q$	$\text{I} \rightarrow 2-3$

(f) EV

	\vdots	
13	$(r \vee t) \rightarrow p$...
14	$s \rightarrow p$...
15	$u \wedge t$...
16	$(r \vee t) \vee s$...
17	p	$\text{EV } 13, 14, 16$
18	u	$\text{E} \wedge 15$
19	$u \wedge p$	$\text{I} \wedge 17, 18$
	\vdots	

1	$r \rightarrow s$	Ass.
2	$(p \wedge q) \rightarrow s$	Ass.
3	t	Ass.
4	$(p \wedge q) \vee r$	Ass.
5	s	$\text{EV } 1, 2, 4$
	\vdots	

3. Offer a proof for the following arguments:

(a) $s, s \rightarrow p, (p \wedge q) \rightarrow r, q \vdash r$

(b) $(p \vee q) \rightarrow s, p \vdash s$

(c) $s \rightarrow t, r \rightarrow t, p \wedge (s \vee r) \vdash t$

(d) $r \rightarrow q, s, (q \wedge s) \rightarrow u \vdash r \rightarrow u$

(e) **Hard:** $s \rightarrow r, q \rightarrow r, u \rightarrow q, (r \vee u) \rightarrow p, s \vee u \vdash (w \rightarrow r) \wedge r$ ²

²This is easier with the rule Repetition.
